SPINE "CRACKING"

(Beliefs in the Population)

@dr.caleb.burgess

Clinical Implications

- ✓ Around 33% of the population believe that the "crack" that comes with spinal manipulation is due to **mechanical realignment** or **movement between the vertebrae**
- ✓ These beliefs may perpetuate the harmful conceptualizations that the spine can easily slip "out of place", is **fragile**, or can **easily be damaged**.
- ✓ This points to the need for clinicians that use manipulation to become better acquainted with **up-to-date research** and/or **improve communication** with their patients!
